Gulf Coast Goods – Sales Performance Analysis & Dashboard

SQL (SQLite), Microsoft Excel, Power BI

Project Overview:

End-to-end business data project analyzing sales performance for a fictional multi location retail company (Gulf Coast Goods) operating in Fort Myers, North Port, and Naples, Florida. The project covers the full analytics workflow: data cleaning, transformation, exploratory analysis, insight generation, and interactive dashboard creation.

Key Steps Completed:

- Imported and cleaned messy transactional data using SQL (standardized categories, fixed date formats, handled missing values, and removed duplicates)
- Built multiple analytical views in Excel using PivotTables (category performance, store comparison, channel mix, monthly trends, and top products)
- Designed an interactive Power BI dashboard with KPI cards, trend analysis, and categorical breakdowns

- Delivered clear business insights and actionable recommendations

Key Insights:

- Student Essentials was the highest-revenue category
- Fort Myers (flagship store) significantly outperformed other locations
- In store sales accounted for the majority of revenue compared to online
- Phone Case, Laptop Sleeve, and USB Hub were the top-performing individual products

Skills Demonstrated:

Data Cleaning, SQL, Excel (PivotTables & XLOOKUP), Data Modeling, Power BI Dashboard Design, Business Insight Generation
